

ABVD: six Sulawesi word lists (Muna, Bugis, Makasar, Wolio, Sa'dan Toraja, Tolaki)
1,357 forms for 210 meanings; forms taken as written

Label from ABVD's cognate coding
coded = has a cognate-set number (919)
uncoded = has none (438)

25 inputs per form
17 from the written form (length, vowels,
glottal mark, letter strings), 8 from the meaning

Classifier (gradient-boosted trees), scored on forms it has not seen:
five-fold cross-validation, ten repetitions; one whole list held out

Ranking of uncoded
above coded forms
(AUC; tables 3-4, fig. 4)

Profile: what distinguishes
uncoded forms
(table 5, figs 1 and 5)

Label x score cells,
with examples
(tables 6-7)

Three checks on what 'uncoded' means: Makasar against the PMP entry, by meaning (table 2, fig. 3);
Tolaki against its subgroup (look-alike screen with a chance control); uncoded forms across lists
(permutation test). Spelling tests: glottal conventions, digraphs, size inputs (table 8)
